

Floor Map: how to use

Open Floor_Map_Simple.xlsm. Everything is counted in pallets.

PUT A PALLET AWAY

1. **Double-click** an empty square.
2. Type the **number** of the item and press Enter.
3. (Or click the square, click the **little arrow**, and pick.)

MOVE A PALLET

1. **Double-click** the pallet. It gets a black border.
2. Click where it goes. Click another pallet to **swap** them.
3. Changed your mind? Press **Esc**.

TAKE A PALLET OUT

1. Click the square.
2. Press **Delete**. The square goes back to stripes.

THE BUTTONS (top of the Map)

Find space	Pick an item and how many pallets: it shows the nearest free squares and fills them.
Find item	Shows every pallet of an item with a pink border.
Low stock	Lists everything that's running low.
Undo	Takes back the last change.
Clear	Removes the pink borders and cancels a move.

What the colours mean

	Coloured square	A pallet is there
	Stripes	Free space
	Red square	Wrong zone: move it
	Grey	Not ours: don't use

LOW on the Stock sheet means you're nearly out: time to order.

Setting up

NEW ITEM?

1. Go to the **Stock** sheet.
2. Type it on the first empty row: **code**, **description**, **zone** (BOX, BAG, FLM or LBL).
3. It now shows up in the lists on the Map.

CHANGE A ZONE NAME?

1. Go to the **Stock** sheet.
2. Type over the name in the **pink box** on the right.
3. The Map changes by itself.

TURN ON THE MACROS (ONCE)

1. Open **Floor_Map_Simple.xlsx**. Click **File** → **Save As** and choose **Excel Macro-Enabled Workbook (.xlsm)**. Use the .xlsm from now on.
2. Press **Alt + F11**. On the left, double-click the sheet that says **(Map)**.
3. Open **Floor_Map_Simple_VBA.txt**. Copy everything **below the line of stars** and paste it in.
4. Close that window. Click any square on the Map. The **buttons** appear.
5. Press **Ctrl + S**. Next time, click **Enable Content** if Excel asks.

Every change is saved on the **Moves** sheet: when, who, what, from and to.
